AI reads. Code writes. *Humans decide.*

A decision pipeline for regulated document workflows. **Every verdict cites the rule that fired,** and the reply that leaves the building is never written by a model.

01 · AI-IN

AI reads

Vision, triage and retrieval models turn a case file into structured fields and a cited verdict. Every step has a fallback.

02 · DETERMINISTIC-OUT

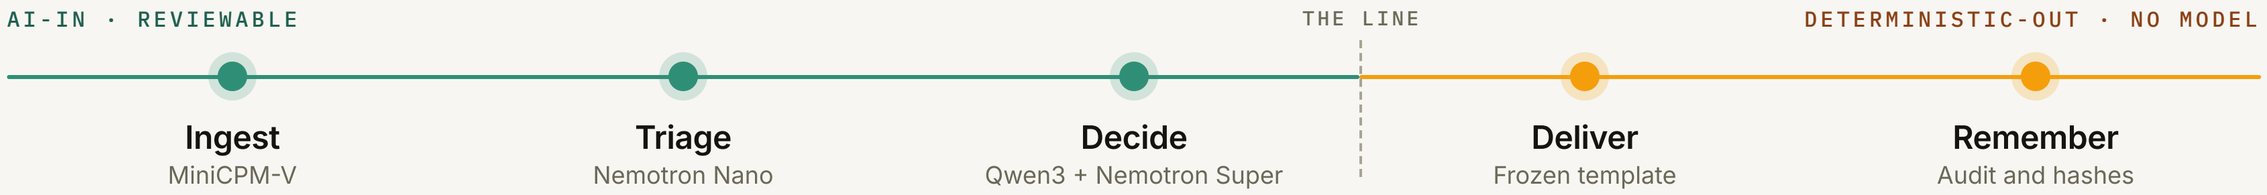

Code writes

The reply is merged from a frozen, human-approved template. No model on the render path, enforced by a build-time test.

03 · PEOPLE

Humans decide

A reviewer sees every stage in the pipeline view, then approves or rejects a held reply before it leaves.

934
tests, 928 passing, 0 failing

0
models on the render path

24 → 98
of 104 fields labeled right, with vision and crop

2
programs on one codebase, same household, opposite verdicts

Test counts from the latest full run · labeling result is one benchmark form · demo data is fictional · pilot figures not yet measured
